Worksheet 7 Real-World Problems: Multiplying and Dividing with Fractions

Solve. Use models to help you.

1. There are 144 pieces of fruit in a box. Of the fruit in the box, $\frac{1}{8}$ are red apples and $\frac{1}{4}$ are green apples. The rest are oranges.

a. How many oranges are there altogether?

$$\frac{1}{8} = 18 \quad \frac{1}{4} = 36 \quad \frac{5}{8} = \text{oranges} \quad 18 \times 5 = 90$$

$$\frac{2}{8} + \frac{1}{8} = \frac{3}{8} \quad \frac{1}{8} = \text{red apples} \quad \frac{8}{8} - \frac{3}{8} = \frac{5}{8}$$

$$\frac{3}{8} = 54 \quad \frac{1}{4} \times 2 = \frac{2}{8} \text{ green apples}$$

b. What fraction of the fruit are oranges?

There are 90 oranges altogether

$\frac{5}{8}$ the fraction of the fruit are oranges are $\frac{5}{8}$

2. A bakery had 54 rolls. Of the rolls that the bakery had, $\frac{1}{6}$ were sold in the morning and $\frac{1}{2}$ were sold in the evening.

a. How many rolls were sold altogether?

$$9 \times 4 = 36 \quad \frac{1}{2} = \frac{3}{6} + \frac{1}{6} = \frac{4}{6}$$

36 rolls were sold altogether 27

b. How many rolls were not sold?

18 rolls were not sold

$$\frac{6}{6} - \frac{4}{6} = \frac{2}{6}$$

$$54 - 36 = 18$$

rolls not sold

Name: LO2

Date: 12-7-20

Solve. Use models to help you.

3. Mr. Woods had \$840. He spent $\frac{3}{7}$ of the money on a lawn mower. He spent $\frac{1}{8}$ of the remaining money on a gift for his wife. How much money did Mr. Woods have left?

Mr. Woods
has \$420 left. $840 \div 2 = 420$

4. Rebecca had a piece of ribbon. She used $\frac{3}{8}$ of it to tie a package. She used $\frac{1}{5}$ of the remainder for a bookmark. Rebecca had 24 centimeters of ribbon left. What was the length of ribbon Rebecca had at first?

Rebecca had 48 centimeters
of ribbon at first.

Complete each model to show the statements.

5. ✓

A liter of milk is divided among 2 adults and 4 children. Each adult drinks $\frac{1}{4}$ liter and each child drinks $\frac{1}{8}$ liter.

$$\frac{1}{8} \times 4 = \frac{4}{8} = \frac{1}{2}$$

$$\frac{1}{4} \times 2 = \frac{2}{4} = \frac{1}{2}$$

$$\frac{1}{2} + \frac{1}{2} = 1$$

2 Adults

4 children

$$\frac{1}{4} + \frac{1}{4} =$$

$$\frac{1}{8} + \frac{1}{8} + \frac{1}{8} + \frac{1}{8} =$$

✓

A pizza is divided and given to 3 boys and 2 girls. Each boy gets $\frac{1}{6}$ of a pizza and each girl gets $\frac{1}{4}$ of a pizza.

$$\frac{1}{4} \times 2 = \frac{2}{4} = \frac{1}{2}$$

$$\frac{1}{6} \times 3 = \frac{3}{6} = \frac{1}{2}$$

$$\frac{1}{2} + \frac{1}{2} = 1$$

3 Boys

2 girls

$$3 \times \frac{1}{6} =$$

$$2 \times \frac{1}{4} =$$

$$\frac{1}{6} + \frac{1}{6} + \frac{1}{6} =$$

$$\frac{1}{4} + \frac{1}{4} =$$

1 melon 6 pieces

$$\frac{1}{6}$$

7. James has 5 melons. Two of them are shared among 10 students.

What fraction of a melon will each student get? Each student will get $\frac{1}{5}$.

The remaining melons are then divided into $\frac{1}{3}$ each. These pieces are shared

equally among the students. How many students do not get a piece of these

melons? 1 student does not get a piece of these melons.

How much of a melon will each student get in total?

✓ Every student will get two pieces except
1 student who will get 1 piece in total.
